

Compact Commercial Grinder

# Siberian

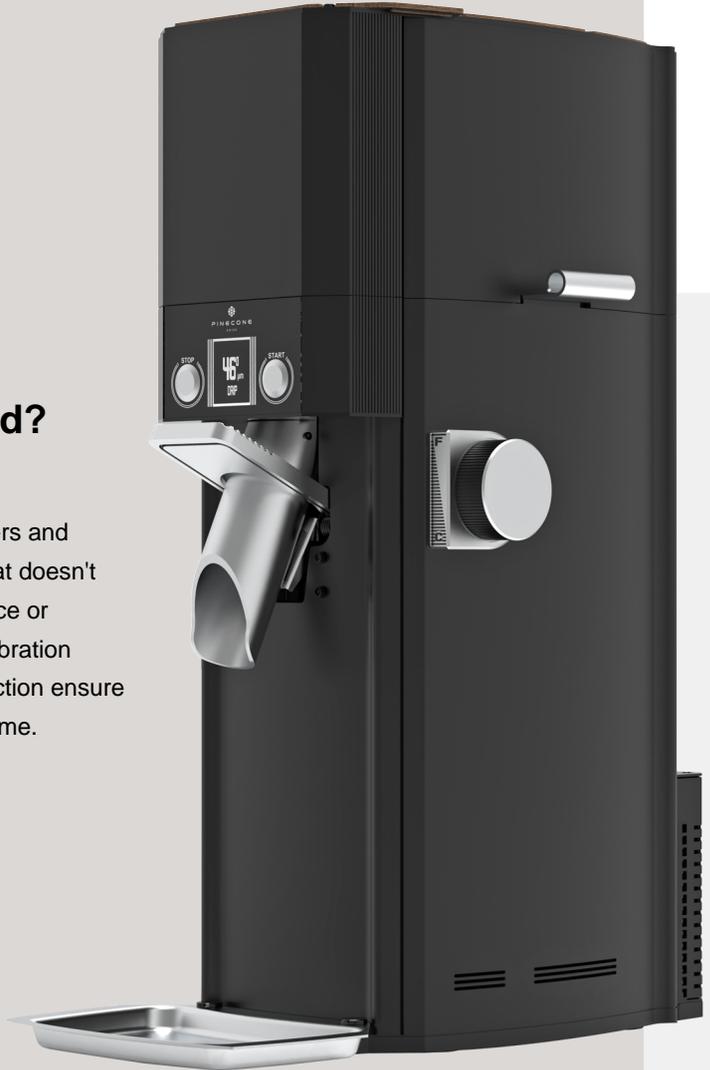

The Siberian is the first grinder in the market that reaches over 2.5 kg / 5 lbs per minute and fits onto compact counterspaces.

120 mm flat discs coupled to a heat-free brushless motor enable commercial loads without requiring industrial power supply or large equipment.

**Tight counterspace but high output needed? Siberian is here.**

An ideal choice for roasters, wholesalers and retailers looking for a sleek solution that doesn't compromise on heavy-duty performance or grinding range. Digital micrometric calibration "by-wire" and modular service construction ensure easy usability and high equipment uptime.

**commercial loads in a compact design**
